

Project Progress Report 2

I have learnt java script and CSS and used them to improve the look and feel of the website. I started by creating the project's HTML structure, defining the layout and various elements. Used CSS to style the HTML elements, applying colors, fonts, and layout to create an appealing and responsive design.

Employed media queries in CSS to ensure the project is responsive and looks good on various devices and screen sizes. Incorporated CSS animations and transitions to add visually appealing effects, making the project more engaging.

Integrated JavaScript to add dynamic behavior to the project, enhancing user interactions and improving the overall user experience. Utilized JavaScript event listeners to capture user actions, such as clicks or input changes.

Implemented toggle and accordion functionalities using JavaScript to hide or reveal content based on user actions.
